(57) **ABSTRACT**

Ammunition feeder with a handle portion and a head portion. The handle portion is integrally attached to the head portion. The handle portion is a flat elongate shape having raised portions to help the user maintain his grip on the handle. The head portion is shaped to accept the front end of a standard ammunition belt. The head is flattened longitudinally on one side and includes a longitudinal recess so that the feed pawl on a standard machine gun is not activated by the head. A preferred embodiment includes that the feeder fits with the M 60 machine gun and the 240 Golf machine gun.
